TRIFLASH ROAD WARNING TRIANGLE OTHER DANGER SYMBOL (!)

Size : 500mm

High Intensity

Prismatic Grade or Brilliant Grade

Could be Deployed

on the ground, on vehicle or on Traffic cone.

The Other danger Symbol Road Warning Triangle is intended for use on the ground by the fire brigade, law enforcement or rescue services to mark a danger zone during an intervention. Presentation of the (!) triflash on the ground

This ground triflash is used by rescue services and fire brigades to warn of a hazard or a dangerous area. With its "!" AK14 symbol, this triangle with leds on the three corners of the triangle allows to signal a danger and to intervene fast and safely.

Depending on your needs, it is possible to attach this triflash LED triangle to the roof of a vehicle or to a Lubeck cone using suitable accessories available at extra cost. Characteristics of the AK14 (!) triflash on the ground

This triflash panel with leds lights has a panel with retro-reflective film type T2P or T3 fluorescent, the symbol synonymous with Danger in the center of the triangle and is equipped with 3 leds lights at each corner of the panel, in orange or blue color. The power supply of the leds of this triangle to be put on the ground is available with batteries (2 AR25 batteries) or rechargeable.

A power supply box is present at the back of the triangle with a day/night cell switch above the power supply box.

This triflash triangle is to be placed on the ground. However, it is also possible to attach it to the top of a vehicle roof using an optionally available magnetic holder or to attach it to a traffic cone using a folding bracket, which is also not included in the basic product. This illuminated warning triangle makes it possible to supplement an area beacon and to replace the beacon with a triangle of smaller size than the automatically or manually lifted triangles. This smaller triangle is 46cm high, 46.5cm wide, 10.8cm thick and weighs 3.3kg. Advantages of the AK14 ground triflash (!)

This triflash led AK14 triangle is fully customizable, You can choose the class of the retro-reflective panel, the color of the light diodes visible on the corners of the triangle, the size of the lights (65mm and 95mm sizes available), the power supply, battery or rechargeable in order to have a triangle adequate to your needs during a perfect intervention in complete safety. This triangle has a very large autonomy, between 200 and 600 hours, is totally waterproof with IP68 protection and meets the standards of light visibility.

Many accessories for this light triangle are available such as magnetic bases to fix it on the roof of a vehicle or a mounting bracket to place it on a Lubeck cone.
